## We Make Writing Easy

**Premier Predictor Pro “P<sup>3</sup>”** is a talking word prediction program that works with every program on your computer. If your application requires typing, Predictor Pro will work with it. Predictor Pro will display a word list next to your cursor as you are typing, displaying the most probable word at the top of the list. Use your arrow keys to go up and down the list and when you hear the word you want, just select it and that word will automatically be entered into your document. The built-in word search lets you search for a word and it too can be automatically inserted into your document.

### What is word prediction?

Word Prediction is a technology developed to assist people who have difficulty spelling and writing. As a person types, word prediction will display a list of the most probable words, allowing the typist to select the word from the list. This technology can significantly reduce the number of key strokes an individual needs to make. The built-in talking dictionary also lets the typist hear the definition to make sure that the word they select is the right word. – for example, “whether” vs. “weather” can be very confusing to some writers.

**Add Words easily with the Document Digester™:** Predictor Pro has a built in Document Digester™ that you can feed it documents. It will read through the documents and find words that are relevant to you. For example, most people never have a need to spell Cheboygan, but if you are from Central Michigan you will need that word. The Document Digester will find words you use and optimize the prediction for you by reading documents that are relative to you. The prediction library is very robust, but if you use the Document Digester it can be optimized for you.

### Special Features:

- **Works with all programs:** MS Word, Word Perfect, Internet Explorer, Excel, PowerPoint, MS Works.
- **Adjustable Grade Level Word Prediction.** Select the appropriate grade level of words displayed in the prediction list.
- **Multi-lingual Word Prediction:** French, English, and Spanish word prediction in one box.
- **Adjustable Prediction Window:** Adjust the position, font size and location of the prediction box.
- **Networkable Libraries:** Add words to a single master list that all students can access.
- **Large Libraries:** Predictor Pro has one of the larger prediction list in the industry with hundreds of commonly misspelled words and phonetic spelling of words.
- **Over 20 Occupation-specific libraries:** Including topical areas such as Medical Terms.

**Confusable words are a thing of the past.** The Predictor Pro has a definition for almost every word in the English language. The dictionary is available for English. French and Spanish are coming soon. Just right click on the word in the prediction – a window will open, and users can see the definition and have it read to them.

**Word Search:** Can’t think of the word or only know part of it?– Predictor Pro comes with a built-in “word search” so users can search for words. Sometimes word prediction is too much and sometimes it is not enough. That is when “word search” becomes useful. It lets you search for a specific word. You can browse the list of words and when you hear the one you want, “word search” will insert it right into your document.

**Network-Enabled Libraries:** Chances are that if you add words to a prediction list (e.g. city names or places), they are relevant for an entire group of users. In the past, educators had to update every workstation. Now with the network-enabled libraries, they only have to update that library and instantly those words will be available to all students. The new “word caching” technology will allow the Predictor Pro to run fast anywhere, even on slower networks.

**Premier Predictor Pro** is available as a standalone product, but it is also part of the Literacy Productive Pack and the Accessibility Suite version 5.4. You will also find it as part of the Key To Access 4.0.

**Price: \$89.95 for a single workstation license.**

**Network version: \$799.95 for a 10-user license - Includes 1 Admin client and 9 User clients.**
