

# Write Now

*The Right Tool for Making Writing Better*

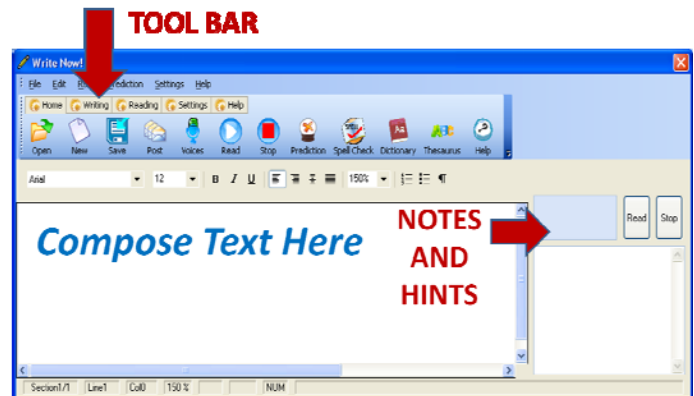

Write Now is a new writing tool designed to help writers of all skill levels. Write Now is optimized for, but not limited to, working with online or proprietary applications. It is compatible with cloud applications like Google Docs™, email, Facebook as well as such word processors as Microsoft Word® and WordPerfect®.

Write Now works with any application that requires textual input. It helps the user compose small amounts of content prior to posting them to an application. The many composition features built into Write Now assist the user in ensuring that written content is correct BEFORE it becomes a permanent post in a document or on the Internet.

## Special Features

- Proofread by hearing
- Confusable and homonym support
- Talking thesaurus
- Talking spell-check
- Misspelled words appear in red
- Word prediction
- Talking dictionary
- Auto-correct misspelling
- Word assist
- Writing analytics
- Post writing to any online application

Write Now combines a series of complex features and makes them easy to use. The first step is to enter a simple thought or concept into Write Now. The “word prediction”, “word assist” and “confusable support” functions assist the user with capturing their ideas. Once the thought process is completed, the “read” feature is used to read the entry aloud to confirm the accuracy of the communication. The “document analyzer” processes the written content. The “writing analyzer” evaluates the writing and provides specific information such as word and sentence use, Flesch-Kincaid grade level and readability levels.
